Announcement: Connectra has made a change to its 14” heater assembly. We have added a second handle to better facilitate lifting the heater in and out of the fusion machines. This secondary handle may be retrofit onto existing heaters by a RETROFIT HANDLE KIT, part number 600295. To install the secondary handle, you must detach the power cord, reorient the wire connection box, install the secondary handle and then reconnect the power cord. The retrofit kit includes all connectors, insulation sleeving, and high temperature tape to accomplish the installation.

The heater bag frame must also be modified to accept the heater with the secondary handle. The top support rod must be removed from the frame.
